

HR Management System

TABLE OF CONTENTS

Front-end Requirements

Back-end Requirement

→ PROJECT OVERVIEW

The HR Management System shown in the image provides a structured dashboard for managing various employee-related tasks. It includes features such as employee records, work shifts, and attendance tracking. The leave management module allows employees to check their leave status, and view a calendar, summaries, and arrears. Additionally, it supports holiday management, project tracking, and department organization. The interface appears user-friendly, with a collapsible navigation menu for easy access to essential HR functions, ensuring efficient workforce management.

FRONT-END REQUIREMENTS

→ Steps :

1. Extract the project to a local pc
2. Use the nvm command to switch to the appropriate Node.js version required for your project. (e.g., nvm use 18)
3. Replace 18 with the version specified in your project's requirements.
4. Install packages.
`yarn install --network-timeout 600000`
5. Add the backend URL to the env
6. Build the Project:
 - Run the following command in your terminal to build your React project for production:
 - `NODE_OPTIONS="--max-old-space-size=4096" yarn build`
7. Now, compress the dist folder
8. Create a subdomain
9. Upload the zip file to the subdomain's folder
10. Move compressed files to the root directory.

→ ENVIRONMENT VARIABLES

- VITE_API_BASE_URL=<https://backend-url>
- VITE_GOOGLE_MAP_API=google_address_api_token

→ DEPENDENCIES

- "@cyntler/react-doc-viewer": "^1.14.1",

- "vitest": "^0.34.3"

BACK-END REQUIREMENTS

→ Steps:

1. Upload the zip to the public folder and extract.
2. Create a database
3. Create a database user
4. Give the user access to the privileges to the database
5. Add db credentials to the environment of the back-end project
6. Again, create email accounts and add credentials to the env
7. The folder name in the public HTML will be the path for the back end. For example https://domain_name.com/hrm-backend-t/
8. Upload the database using phpMyAdmin

→ DB CONNECTION IN THE ENV

- DB_DATABASE=hrm
- DB_USERNAME=root
- DB_PASSWORD=

→ EMAIL SETTINGS

- MAIL_DRIVER=smtp
- MAIL_HOST="MAIL_HOST"
- MAIL_PORT=465
- MAIL_USERNAME="MAIL_USERNAME"
- MAIL_PASSWORD="MAIL_PASSWORD"
- MAIL_ENCRYPTION=ssl
- MAIL_FROM_ADDRESS="MAIL_FROM_ADDRESS"
- MAIL_FROM_NAME="\${APP_NAME}"

→ COMPOSER.JSON
